

Welding and Fabrication of Hastalloy

Hastalloy has excellent resistance to a wide variety of chemical processes. Precision Welding and Fabrication has years of experience working with Hastalloy process piping and plate fabrication.

Precision Welding and Fabrication was the chosen contractor for a highly critical chemical weapons disposal plant. The chosen material was Hastalloy C-276. The welding had to exceed welding codes for this critical application. Our welders exceeded expectations with a repair ratio of 1/10th of 1% of total welds and completing the project weeks ahead of schedule.
